

## Seminar

---

# Continuous Engineering and Virtual Validation for Automotive

### Day 1 – Foundations of Continuous Engineering

- **Introduction to Continuous Engineering**
  - Introduction to Continuous Engineering practices for modern software development
  - Just enough Traceability among CI/CD pipelines, business, and operational artifacts
- **System Quality in Continuous Engineering**
  - The ISO 25010 as the Core Quality Model for Continuous Engineering

### Day 2 – Testing and V&V for Continuous Engineering

- **Best Practices for Test Management and Design in Continuous Engineering**
  - Test management for continuous delivery: Organization, planning, and execution
  - Strategies for test documentation in iterative cycles
- **Virtual Validation in Continuous Engineering**
  - Virtual integration and validation: Tools and methods
  - Integrating Simulations and Digital Twins practices and technologies in CI/CD Pipelines
  - Continuous architecture and design evaluation by means of simulation

### Day 3 – Streamlining SPICE and ISO 26262 with Continuous Engineering

- **Automotive SPICE and Continuous Engineering**
  - Foundations of Automotive SPICE: Phases, requirements, and artifacts in end-to-end processes
  - Continuous architecture and design evaluation by means of simulation
  - Case studies: SYS.3 System Architecture and SYS.4 System Integration Test
  - Adapting Automotive SPICE processes for iterative and continuous workflows
- **ISO 26262 Foundations**
  - Considering ISO 26262 recommendations as an integral part of Continuous Engineering practices
  - Testing safety-critical features: Methods and tools
